

The Interaction Between ITM, GridBoxer, and PipBoxer

Monday, 11 February 2008

Last Updated Friday, 29 August 2008

ITM (Investatech Trades Manager) does not directly interfere with PipBoxer and/or GridBoxer. It lets them analyze the market, place pending or market orders and manage individual orders. It only closes trades if the open profit or open loss caused by trades (usually more than one trade) reaches a specific level.

This means that you may still see some of the trades close at loss or profit. In such cases the trades are directly managed by PipBoxer and/or GridBoxer.

There is however, one effect that ITM shows on GridBoxer. It could potentially increase the number of trades that GridBoxer places due to the fact that some of the trades are closed earlier than what expected.
