

Is ITM a Separate Entity from PipBoxer or GridBoxer?

Thursday, 14 February 2008

The short answer is "No". We were going to embed the capabilities of ITM in each PipBoxer and/or GridBoxer EA. This could cause several technical problems such as sending a request more than one time. We eventually decided to define this strategy as a separate tool.

Since ITM is new we consider use of it optional. Please use it at your own discretion.
