

PipBoxer Email Signals versus PipBoxer Trading System

Friday, 15 February 2008

Last Updated Friday, 15 February 2008

If you purchase PipBoxer signals we will send trading alerts via email to you. The alerts are sent according to the activities on our live account. You will receive three types of email alerts.

- OpenOrder: Suggests opening a new trade. The email contains the name of the currency, the direction of the trade, the SL and TP, and also the Trailing Stop information.
- ModifyOrder: Suggests modifying SL or TP values of an open trade.
- CloseOrder: Suggests closing an open order

Those who receive email alerts need to trade at their own discretion. You have to be a disciplined trader and follow the alerts carefully. Some of the traders use our signals as a tool to make a decision on their own trading strategy. No matter what you do this approach is based on our live trades and of course your discretion.

When you purchase our Expert Advisors the whole trading experience is fully automated. While you still have the chance to interfere with the system behaviour you can leave everything to the system. PipBoxer analyzes the market, enters trades and manages open trades. The analysis is based on your own account activity rather than ours. If you install ITM then you can add an extra level of monitoring to your system.

If you are looking for a fully automated trading system we suggest purchasing PipBoxer Expert Advisors. If you are not using MetaTrader or if you wish to make the decision yourself rather than leaving the decision to a machine then we suggest purchasing our trading signals.
