

## How ITM Could Affect Your Trade Experience?

Tuesday, 26 February 2008

Last Updated Tuesday, 26 February 2008

One of the services that we offer to other businesses is a signal generator based on our successful trading package "PipBoxer V2". The signal generator sends email signals. Parts of the email messages are defined by our customer. So whenever we receive an order from a customer we have to incorporate their settings into our code and then put it into test for a couple of days to make sure it works correctly. We are interested to see email signals about opening orders, managing orders, and then closing orders. The latter is generated by ITM.

We recently received an order from another business to generate email signals. To test all these features we increased the VAR of PipBoxer to a large amount to make sure the movements are quick enough to capture all those types of signals. We also set the "profit\_cap" of ITM to 2% to make sure it closes trades fairly quickly. The result was really interesting. We made over \$220,000.00 on a demo account in two consecutive days. Please see the following report for more information.

PipBoxer opened 4 trades on the first day. ITM closed them all and moved the balance about 2%. The second day a similar action resulted in closing 3 new trades and moving the balance up another 2%.
