

Maximum Trades Placed by PipBoxer EAs

Tuesday, 04 March 2008

Last Updated Tuesday, 04 March 2008

PipBoxer includes a variable "max_open_trades" that gives you the ability to control the trades it opens. The default value is 10. This means that if there are 10 or more trades open or pending in your trading platform it won't enter a new trade. You may change this value to suit your needs.

To change the value of "max_open_trades"...

- Switch to the chart that contains a PipBoxer EA.
- Press F7 to see the Properties dialog box.
- Select the "Inputs" tab (see the image).
- Scroll down to see the "max_open_trades" option.
- Double-click the value. Type in the new value.
- Click OK to save the changes and exit the dialog box. You might need to click OK twice.
- Repeat the same steps for your other EAs.

Please note that this variable considers the total open and/or pending trades placed by PipBoxer, other EAs, and/or manually in all currency pairs.
