

## How does PipBoxer deal with market movements?

Saturday, 08 March 2008

Last Updated Saturday, 08 March 2008

We have built several shields into PipBoxer to help it cope with market anomalies. The most important ones are:

- Daily analysis based on market movements. There are days that system filters the trades out because of the nature of movements. The filtration is based on an indicator that resembles CCI.
- Pipboxer sets the size of SL and TP based on the market volatility
- The trading stripes help avoid unwanted entry to the market.
- Each trade has a built-in expiry so if the market doesn't hit trading stripes prior to the expiry the trade never happens.
- PipBoxer comes with 6 money management tools that even after opening a trade monitor the movements of the market and change the value of SL and/or TP accordingly.

We believe that all these tools help to cope with different market conditions and unwanted moves. For more information about the PipBoxer strategy [click here](#).
